

MyCloudIT: The Fast, Easy Way to Deploy Remote Desktop and Applications in Microsoft Azure

MyCloudIT: The Fast, Easy Way to Deploy Networks in Microsoft Azure

Here's what every Partner needs to know about Microsoft Azure: as a flexible cloud platform that enables you to quickly design, deploy, and manage client networks globally, Microsoft Azure makes growing your business easy.

Microsoft Azure supports the broadest range of operating systems, applications, databases, and devices so you can easily integrate your clients' existing IT environments into the cloud. On top of that, Azure cloud service gives you choices to maximize your existing resources and investments. The Azure platform runs on a global network of Microsoft-managed data centers across 22 regions worldwide. Since Azure supports the same technology solutions that millions of IT providers know and rely on, you're able to use the skills you already possess to manage enterprise apps faster and with greater expertise.

The benefits of leveraging Microsoft Azure for your end-users are clear, but what if there was a way to automatically deploy and manage Remote Desktop Services in the Azure cloud using your own Microsoft Azure credentials? With MyCloudIT, all of that – and much more – is possible.

Deliver Automated Solutions in Microsoft Azure

MyCloudIT was conceived in April 2013 when the founders of the company got frustrated with the IT offerings in the market while trying to start the company operations. They decided to create the

first IT network automation solution based on IaaS (Infrastructure as a Service) in Azure, and MyCloudIT was born. As a software platform that makes delivering client desktops, applications, and IT infrastructure a breeze, MyCloudIT is the first product of its kind.

95% Reduction in Setup Time

With MyCloudIT, your clients can be up and running in the Microsoft Azure cloud in no time. All you need to do is set up a MyCloudIT account, enter your Azure credentials, select a template based on your clients' network requirements, and deploy your new configured desktops in a flash. You can eliminate up to 95% of the time it takes to setup and configure your end-user networks with our Azure automation platform – without requiring any on-premises equipment for your customers.

Transform Your IT from CAPEX to OPEX

Give end-users the ability to significantly save time and money: instead of purchasing new hardware and licenses upfront (CAPEX), bundle those IT expenses into a single, monthly payment (OPEX) using your own Azure subscription (Free Trial, EA, Open, Direct, CSP) or purchasing directly from MyCloudIT. By automating the delivery of networks in your Microsoft Azure account, you can save yourself the long hours of configuration, deployment, and maintenance.

Support Multiple Devices & Machines

MyCloudIT allows you to become a global Desktops-as-a-Service provider. You're equipped with an automated platform that supports multiple devices – including Windows and Mac machines, thin clients, Android or iPad tablets, and smartphones. Take advantage of MyCloudIT to expand your client base without increasing overhead.

Our Partnership

With all of your client network deployment and management done from a single, user-friendly dashboard, you can scale your organization quickly and expand your capabilities. **Contact us today to learn more!**
