

Realizing the Cost Savings of MyCloudIT for Your IT Organization

Realizing the Cost Savings of MyCloudIT for Your IT Organization

As the first product of its kind, [MyCloudIT](#) allows IT organizations and MSPs of all sizes to quickly deploy and manage remote applications, remote desktops, and virtual machines in the Azure Cloud. Rather than shelling out large amounts of money on expensive server equipment, desktops, and licenses – followed by long hours of setup and maintenance – IT organizations can set up a new deployment in just a few minutes

When you're trying to expand your business and become a global IT service provider, you need to rely on innovative and efficient technology to help you service clients quickly and cost-effectively. That's why here at MyCloudIT, we've created a simplified platform to take out all the guesswork of delivering remote applications, remote desktops, and infrastructure to SMBs and enterprise customers in the Azure Cloud. Our automated platform allows MSPs to quickly scale and expand their services and capabilities with complete cost control and saving potentials.

Achieve a Predictable IT Budget and Greater Cost Savings with MyCloudIT

By utilizing the MyCloudIT platform for your IT organization, you can automatically take the heavy lifting out of provisioning, managing, and monitoring Cloud services in Microsoft Azure. Even costs become clearer and manageable. From the first step of the deployment process, MyCloudIT allows MSPs to see what your monthly costs will look like. At any time, you can monitor your consumption and maximize your savings within a few steps. Our cost control features include:

Cost Estimator: Based on the deployment details, i.e. the size of VMs, the size of storage, and the number of users, you can instantly predict what your monthly costs will look like. Modify the information and recalculate the cost to achieve your IT budget.

Azure Usage: Your Azure usage fluctuation will directly affect your monthly total expense. No worries, our Azure usage monitoring gives you the latest updates on Azure consumption within the last 30-day period to keep you within the limit.

Auto Scheduler: Save up to 30% or more off your Azure consumption with this smart scheduler, where you can automatically turn off the virtual machines during non-working hours to save on Azure usage. Adjust the scheduler anytime to maximize your savings while ensuring productivity for the end-users

Predictable, Elastic Pricing

With MyCloudIT's scalable and elastic pricing, your IT organization can achieve a predictable IT budget and see greater cost savings by paying only for what you need – nothing more, and being able to monitor and manage your savings at any time. See what MyCloudIT can do for you:

Partnering with MyCloudIT

Isn't it time for you to expand your organization's capabilities and go global without having to increase overhead or costs? For more information or to sign up for a free trial, [get in touch](#) with us today.
